

Durable, Long-lasting Punches & Punch Blanks

Global leader in providing fabrication and stamping solutions

a MISUMI Group Company

www.daytonlamina.com

TuffPunch® Punches and Punch Blanks

Product Applications

Dayton Lamina TuffPunch® Punches and Punch Blanks are Kommercial quality products manufactured with thicker, larger, and 10° angled diameter heads, and are designed to reduce punch load and significantly lower failure rates when using heavy gauge and high tensile material. (See p. 3 for additional information.) TuffPunch® products are well-suited for high-demand industries where frequency and heavier-than-normal impact punching activity occurs and where optimum performance is required.

Dayton's TuffPunch® product line includes: Dayton Jektole® Punches; Regular Punches; Center Dowel Punches; Punch Blanks; and Retainers. Both standard sizes and standard alterations are shown in this catalog.

Minimizes Head Failure

All Dayton TuffPunch® products are designed with a 10°-angled head with a diameter equal to the shank diameter (see photo). This design allows the perforating forces to travel up from the shank and completely through the head. This eliminates the lateral shock waves that would otherwise put stress on the outer edge of the head, resulting in frequent failures—especially in heavy-duty

applications.

In addition, Dayton
TuffPunch® products
are available in common shear angle
configurations to reduce
punch load and minimize the

risk of slug pulling. Shear angle configurations include: chamfer; conical; double shear; and single shear. For more information, see "Standard Alterations" on p. 9.

Cryogenic Treatment Standard

DayKool™ (XCR)—a cryogenic steel conditioning process used primarily with hard, thick materials to improve strength, toughness, and dimensional stability—is **standard** on all Dayton TuffPunch® products.

The DayKool™ process utilizes a liquid nitrogen vapor to cool the steel to −184° C (-300° F), which creates metallurgical changes in the structure that disperse carbides throughout the metal. The result: increased wear resistance (finely dispersed carbides provide more evenly distributed wear); less sharpening time; no loss of resistance after sharpening; longer die runs; and less downtime.

Surface Coatings

Punches can be coated to increase material hardness, reduce galling, and improve wear/ and or corrosion resistance.

Surface Treatments

DayTride® (XN)—A low temperature, costeffective surface application that treats all exposed surfaces. Provides increased dimensional stability. Ideal for punches and die buttons. Approx. hardness: RC73.

XVP—A thin film coating provides superior hardness (harder than carbide). Supersmooth finish on the point helps reduce galling and maintenance. Ideal for higherthan-normal punching frequency.

XPS—Super-smooth polish on the point to reduce galling and improve punch life. Use with the appropriate coating for your application to maximize punch life and reduce maintenance costs. Excellent for extruding applications.

Abrasive Wear

DayTiN® (XNT)—Excellent wear resistance and lubricity. Not recommended for stainless steel, copper, or nickel. A good general-purpose coating. Approx. hardness: *Vickers 2300.

TiCN (XCN)—Ultra-hard (harder than carbide), thin coating. Provides superior abrasive wear resistance and lubricity. A very good general-purpose coating for all materials. Upgrade over XNT. Approx. hardness: *Vickers 3000.

DayTAN™ (XAN)—Ultra-hard (harder than carbide), high-aluminum coating. Provides high temperature resistance. Well-suited for applications where surface heat is generated. Ideal for HSLA, dual phase, and TRIP steels. Upgrade over XCN. Approx. hardness: *Vickers 3400.

ZertonPlus[™] (XNA)—Superior hardness (harder than carbide); provides superior abrasive wear resistance and excellent lubricity. Provides highest temperature resistance, thermal shock stability, & hot hardness. Approx. hardness: *Vickers 3200.

Adhesive Wear

XNM—A solid lubricant coating. Provides both lubricity and wear resistance not available from other PVD or CVD processes. Ideal for aluminum, copper, pre-painted, and galvanized steels. Approx. hardness: *Vickers 2000.

XANL—High hardness and temperature resistance of XAN coating topped with an anti-frictional coating with excellent lubrication properties. Approx. Hardness: Vickers 3000.

XCD—Diamond-like carbon coating. Combines high hardness with an extremely low coefficient of friction. Good protection against abrasive and adhesive wear. Ideal for aluminum. Approx. hardness: *Vickers 5000.

XCDH—Super-smooth finish combined with advanced DLC coating for a very low coefficient of friction with extremely high wear resistance. Approx. hardness: *Vickers 5000.

XCDP—Super-smooth finish combined with a DLC coating for a very low coefficient of friction with high wear resistance. Excellent for stamping aluminum. Approx. Hardness: Vickers 2800.

Extrusion Coatings

XNP—The ultimate coating for improved resistance to galling; excellent wear resistance, superior surface finish, and high lubricity. Ideal for extruding and forming applications. Tolerance is ±.005 mm. Approx. hardness: *Vickers 3100.

XNAProgress (XNAP)—Ultra-hard coating that absorbs shear stress; provides excellent high-temperature resistance. Ideal for stamping where tools are exposed to extreme stress profiles. A good alternative to TD coating without the dimensional changes associated with that process. Approx hardness: *Vickers 3200.

Miscellaneous Coating

CRN—Excellent adhesion, high toughness, and good corrosion resistance. Primary applications are metal forming (copper, brass, & bronze), metal die casting, and plastic injection molding. Approx. hardness: *Vickers 1800-2100.

*Vickers used when RC exceeds 80.

TuffPunch®, DayKool™, DayTAN™, ZertonPlus™, Daytride® and DAYTiN® are trademarks of Dayton Lamina Corp.

Ordering Information

Center Dowel Punches & Retainers

This catalog contains Center Dowel Punches (Jektole® and Regular) and TuffPunch® Single Head Punch Retainers, designed specifically to

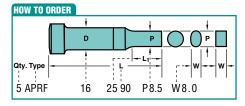

be used with all TuffPunch® punches. Only one dowel is required for round punches, reducing machining time by us to 50%. The in-line center dowel assures precise punch-to-matrix alignment, giving you higher quality parts, longer punch life, and reduced down-time. Shaped punches use a secondary dowel for precise alignment.

Use of the TuffPunch® Center Dowel Punch and Retainer eliminate hand-fitting, cutting mounting time by nearly 50%. Simply pull the retainer from its box, and screw it into the die set. This heads-above-the-rest TuffPunch® combination gives you true dimensional accuracy every time.

Ordering Information

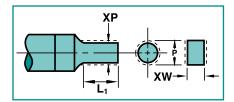

Each page contains detailed instructions on how to order specific Dayton TuffPunch® products. Individual drawings show product shape, dimensions, tolerances, and concentricity. When ordering, you are asked to specify quantity, type, shank and length codes (for example), and other applicable data.

In the example above, the type specified is "APRF." "A" stands for Press-Fit, "P" stands for regular punch, "R" stands for rectangle, and "F" stands for TuffPunch®. 16 is the shank diameter. 25 is the point length, and 90 is the overall length. P 8.5 represents the point dimension, and W 8.0 represents the point width, when applicable.

Standard Alterations

Punches, retainers, and punch blanks are available in sizes other than those listed in the catalog. These special order products can be manufactured for a slight additional charge.

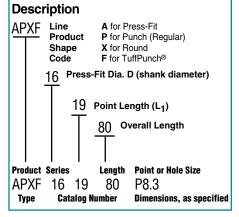

When ordering, you are asked to specify different designations for various non-standard dimensions. For example, if the P & W dimensions are smaller than standard, an "X" must be placed in front of the P or W dimension, e.g., "XP" and "XW." If the point length is longer than standard, designate "XBR" for the point length. The sample drawing above is from the "Standard Alterations" section on p. 9.

Other special order designations include: "XL" for overall length shortened; "XK" for no side hole and no components (for air ejection of slugs); and other special designations for surface coatings.

Product Designation

When ordering, you are asked to specify quantity, product type, length codes, and point or hole size (for example). In addition, use the following chart to define the product as a part number.

Jektole® Punches and Clearances

Jektole®—Dayton's slug ejection punch permits doubling punch to matrix clearance; produces up to three times the number of hits between sharpenings; and reduces burr heights. Jektole® is available in TuffPunch® Punches and Punch Blanks. For additional information on standard sizes and standard alterations, see pp. 4 and 9.

Special Features

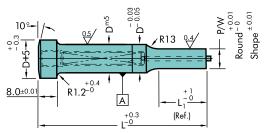

There are several features that contribute to minimizing failures. In addition to the head design and large fillet under the head, all punch shapes with sharp corners will have a carefully blended radius ground to reduce loading on the punch. The reduced load and standard cryogenic treatment result in fewer punch point problems caused by chipping, wear, or breakage.

Features/Benefits

TuffPunch® ARTF and ARTFS Single Head Punch Retainers are designed specifically for use with TuffPunch® Punches—Jektole® and Regular. Only one dowel is required for round punches, reducing machining time by up to 50%. The in-line center dowel assures precise punch-to-matrix alignment, giving you higher quality parts, longer punch life, and reduced downtime. Shaped punches use a secondary dowel for precise alignment.

Use of the TuffPunch® Center Dowel Punch and Retainer also eliminates hand-fitting, cutting mounting time by nearly 50%. Simply pull the retainer from its box, and screw it into the die set. This TuffPunch® combination gives you true dimensional accuracy every time.

Standard Alterations—Punches and Punch Blanks

Standard Alterations

Punches are available in sizes other than those listed on the individual product pages.

Jektole®, Regular, and Center Dowel

XP, XW P & W Dimensions Smaller than Standard

XBR (Straight Before Radius) It is recommended that point lengths be kept as short as possible for optimum strength.

Note: For surface coatings information, see p. 2 and the individual product pages.

Overall Length Shortened (25 min.) Stock removal from point end, which shortens XL

XLB Overall Length Shortened
Stock removal from end point. Point length L₁ maintained.
(Min. shank length 25)

Precision Overall Length

Same as XL except overall length is held to ±0.02.

No Side Hole XK For air ejection. No cost.

Shear Angles See information at right.

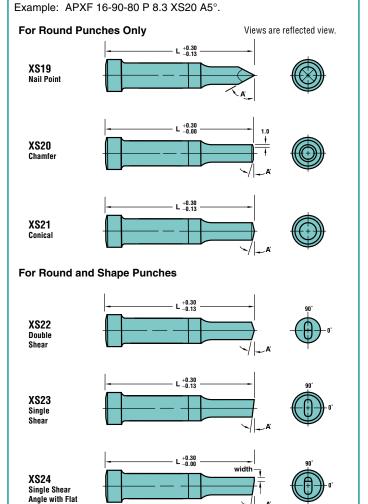

ΧJ **Smaller Jektole Components**

Shear Angles (XS)

XS

TuffPunch® products are available in common shear angle configurations for all standard shapes. Shear angles are also available for classified shapes as special orders.

Shear angles are available in any angle. Specify angle in whole degrees. If half degree is necessary, specify as a decimal, e.g., 8.5°. (Tolerance on all angles is ±15 minutes.) Use the chart below to determine the product designation, then simply add the alteration code shown next to the drawings, along with the angle desired.

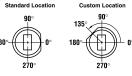

Locking Devices—Flats vs. Dowel Slots

Orientation

The standard location for all locking devices is 0°, and is always on the long side (P) of the shape. Custom locations are measured counterclockwise from 0°.

All views are reflected views

Standard and Alternate Locations

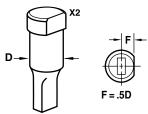

Definitions: Standard Location is at 0°. Alternate Location is 90°, 180°, or 270°. Alternate locations are available at no

Custom Locations

Definitions:

Custom Location is any angle other than: 0°, 90°, 180°, or 270°.

Single **Flats**

Single Flats: X2

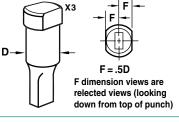

additional charge.

Order Example: X2 — 90°

Single Flats: X5

Order Example: X5 — 135°

Double Flats

Double Flats: X3

Locking Devices: X3 Order Example: X3 — 90°

Second Flat is always parallel to the

first flat.

Double Flats: X6

Locking Devices: X6 Order Example: X6 — 135°

Additional **Flats**

The depth of the flat is taken from the shank, not the head, on punches.

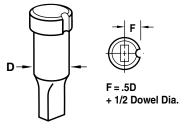

Additional Flats

Code	Depth	Length			
X81	1.5	13			
X82	1.5	16			
X83	1.5	20			
X84	1.5	Full Length			
X85	2.5	13			
X86	2.5	16			
X87	2.5	20			
X88	2.5	Full Length			
X89	Specify Dimensions				

Additional Flats

Code	Depth	Length		
X91	1.5	13		
X92	1.5	16		
X93	1.5	20		
X94	1.5	Full Length		
X95	2.5	13		
X96	2.5	16		
X97	2.5	20		
X98	2.5	Full Length		
X99	Specify Dimensions			

Dowel Slots

Dowel Slots: X4 & X41

For standard locations, specify X4 (3.0 Dowel) or X41 (4.0 Dowel). For alternate locations, specify X4 or X41 and degree required.

Order Example: X4 — 90°

Dowel Slots: X7 & X71

Specify X7 (3.0 Dowel) or X71 (4.0 Dowel). For custom locations, specify X7 or X71 and degree required.

Order Example: X71 — 135°

Location Tolerance

FI	at	Dowel			
F	Radial	F	Radial		
+ 0.013 - 0.0	.025/25.0 inch	+ 0.013 - 0.0	0°4'		

How To Specify

The most common locking devices flat, double flat, and dowel-are available. Simply select the type, then add the code to the component description.

HOW TO ORDER

P (or P&W) Locking Specify: Qty. Type D Code L Dimension Device Example: 1 AJRF 16 P8.5, W.8.0

Other Dayton Products

Ball Lock Punches, Matrixes, Pilots, & Retainers

Dayton *Ball Lock Products* are mainstays in industries with high-demand applications, including automotive and major appliance manufacturing. Because there is no need to pull a die from the press, removal and replacement of worn punches can reduce downtime and improve profitability.

Dayton *True Position® Retainers* (the recognized industry standard) eliminate hand fitting, reduce mounting time, and are ideally suited for both round and complex-shaped products. True Position® allows easy replacement of broken or worn punches.

MaxLife® Die Springs

Dayton *MaxLife® Die Springs* are: made to exact specifications; manufactured to outperform and outlast other major brands; designed specifically for press and mold dies; and ensure optimum operation in heavy industry applications. Corrosion-resistant Dayton die springs are made from pre-tempered chrome silicon wire, and optimize the working life of press and mold dies.

Urethane Stripping & Forming Products

Durable, yet flexible, Dayton urethane strippers and forming products provide superior stripping over conventional strippers; develop higher load-bearing capacity; are tearand oil-resistant; provide exceptional dampening; and are easy to install and replace.

Dayton dual durometer *SMARTStrip*™ *Strippers* (two elastomers molded into a single piece) are a cost-effective alternative to metal spring strippers.

Dayton provides a full range of leading-edge die component products: headed punches, guides, and matrixes; positive-locking Ball Lock products; retainers; slug-ejection punches; retaining systems; die springs; and others.

For details, contact Dayton Lamina or your nearest Dayton Lamina Distributor.

[®] True Position and MaxLife are registered trademarks of Dayton Lamina. TM SMARTStrip is a trademark of Dayton Lamina.

Dayton Lamina is a leading manufacturer of tool, die and mold components for the metal-working and plastics industries. As a customer-focused, world-class supplier of choice, we provide the brands, product breadth, distribution network and technical support for all your metal forming needs.

Our goal is to give our customers the most innovative and valueadded products and services.
